# Opportunity Space

---

## Background:

Ackroo's Mobile App product was Introduced to consumers In 2016 with the D1 mobile acquisition which included customers like Williams Fresh Cafe. There were no feature enhancements between 2016 & 2018. In 2018 Ackroo sold the mobile app to our first existing client: Mr. Gas.

## Past Effort:

There was considerable dedicated effort and investment put Into the app In 2020. 2 full-time developers and 2 part-time devs (including the director of engineering) spent time updating the architecture. Their idea was to make the app easier to deploy (one update adjusts all apps vs. the app at a time structure it used to have). The team also modernized the UI & functions to enable future enhancements faster. This choice was made by the engineering lead In order to scale the app In the future. There was no formal analysis or business case completed to analyze the scope or prove the amount of work was financially worth the effort.

## Current Effort:

Ackroo has only one developer working on mobile apps right now and that developer Is not familiar with the framework, but Is working on improving their skills and has made some significant progress. It takes the developer 1 - 1.5 hours currently to set up a new customer.

The mobile app Is considered a low-support product by the O/S team. There are minimal requests that come In and most of them are related to registration email resends & cellphone dark mode issues. The customer experience touches almost every internal department at Ackroo. There Is room for Improvement in onboarding clients, as well as servicing them through the lifetime of the product.

Based on feedback from interviews, mainly end-users interact with the mobile app and front-line staff. Program administrators rarely interact with the app, however, they are hoping it can provide more value than what is available currently.

# Opportunity Space

---

## Pricing:

The current price for the mobile app product is \$1000 OTR for setup & \$25MRR  
Ackroo launched a sale in 2021: 1/2 price setup. We made 2 sales from this campaign.

## Existing Clients:

42 active clients with a mobile app subscription + 4 moduurn clients

## Existing Ackroo Client Opportunity:

4+ location existing Ackroo Clients: 86

Hosp: 36, Auto: 11, Petro: 14, Retail 25

Seasonal sales cycle: none

Segment opportunity: All segments

Ackroo Website Interaction: approx 1200 page views (all-time)

Market growth- which segment and why? Hospitality due to BD focus

## Major Markets:

-highly competitive/oversaturated marketplaces

COVID Impact: Due to the pandemic, clients have felt a more urgent need to find better solutions to engage their customers and improve their overall brand experience.

## Disruptive Technology:

-Pay by name - customer details show up on POS via geotracking

-Using the credit or debit card as a "loyalty card" (linking to bank)

-Using a phone number as a "loyalty card"

-Facial recognition pay

# Support Trends

"Support for the mobile app typically isn't a lot. Granted, we didn't have many people using it up until the recent boom with our new customers".

-Taylor Gallant, Onboarding & Support Manager

## 2021 Mobile-Related Support Tickets

### Regularly occurring support requests around the mobile app product:

- Inability to resend the confirmation email to complete registration (several requests per month)
- When resetting the password it takes them to the my.ackroo.net portal instead of a branded portal
- General color issues with dark-themed phones with certain coloured fonts (no way to have them in the app for dark and light modes on phones)

Internal processes need to be reviewed as several Issues have been brought to light If we are to expand the sales process.

**3/10**

On a scale of 1-10 (10 being a lot) how much support dedication is focused to mobile app problems?

lack of actual photos of mobile app

Video of end-user experience would be ideal

## KEY FEATURES

### For Merchants

- Reduces the cost of plastic
- Choice of using an Ackroo generic app or use your own custom Custom Mobile Apps.
- Easy to use interface to allow customers to register, check, transfer and/or add to balances
- Automated promotions for doing actions like registration
- A separate database of customers (mobile) to engage and grow
- Increases registration vs. easier methods
- Ability to add important FAQ's, support information, location/contact info, and more...

### For Merchant Customers

- Removes the need to carry plastic
- Ability to register, check, transfer and/or add to balances via the Custom Mobile Apps vs. online
- Ability to opt-in and out of merchant communications

## BENEFITS

- Increase customer sign-ups for loyalty programs
- Stand out from your competitors
- Increase transaction spend with special 'mobile user only' offers
- Increase the frequency of customer return

## Starbucks Rewards Starbucks Coffee Company

1 397 826 Ratings  
Category: Food & Drink

422 754 Ratings  
Category: Lifestyle  
10 000 000 – 50 000 000 Downloads

The Starbucks app is a convenient way to pay in store or skip the line and order ahead. Rewards are built right in, and the customer collects Stars for which he or she can earn free drinks and food with every purchase.

iOS

Android

### Functionality:

- Multiple payment forms
- Map of stores
- Gifts (artworks) to share
- Making an order & menu with good quality photos and orders subsections: Featured, Previous and Favourites
- Music: integration with Spotify
- Inbox
- History
- Profile settings: Personal info, Payment methods, Linked Accounts, Passcode and Touch ID, Notifications
- Apple Watch app available
- iMessage available

### Design advantages:

- 0 taps to see the account status
- Nice visualisation of current loyalty status and points still needed to reach next status
- Good onboarding
- Usable navigation with „Add to basket“ function
- Attractive visually – clean with good quality product photos

### Presentation in store:

Good app store presentation with clean coffee photo accompanied by brand name. Characteristic icon and well written description.

### Top functionalities:

barcode scanner (97%), gift cards (97%), loyalty program (96%), customer service (96%), search (95%), in-store navigation (95%), good deals (95%), sales alerts (95%)

## Dunkin' Donuts – Offers Dunkin' Brands, Inc.

139 917 Ratings  
Category: Food & Drink

52 724 Ratings  
Category: Food & Drink  
1 000 000 – 5 000 000 Downloads

Dunkin' Donuts – Offers (Dunkin' Donuts perks & rewards) app provides DD Perks program members with rewards and loyalty offers, gift cards, On-the-Go Ordering with mobile pay, menus and nutritional facts and store locators.

iOS

Android

### Functionality:

- Coupons overview
- Menu & nutrition tables
- Map of stores with „near me“ function and rich filters (hour service, payment methods, special ingredients)
- Loyalty card management
- Order On-The-Go (order and pay from your phone)
- Emoji keyboard

### Design advantages:

- Registration not required to enter the app
- Informative tutorial by application first launch
- Look & feel of the app consistent with brand character
- Using custom graphics and loader strengthen brand recognition

### Presentation in store:

Dunkin' Donuts app store presentation is rather good, with a clean photo, logo and brand name. Characteristic icon and well written description divided into sections. Custom graphics in Google Play strengthen brand recognition.

**7-Eleven**  
7-Eleven, Inc.

237 Ratings  
Category: Food & Drink

42 382 Ratings  
Category: Lifestyle  
5 000 000 – 10 000 000 Downloads

7-Eleven is a simple app, created to collect and manage loyalty points. A customer is rewarded for buying the food and drinks in 7-Eleven stores. Earned points can be exchanged for rewards of various types. The app also offers the access to available promotions and coupons.

iOS

Android

## Functionality:

- Loyalty account status (no. of points, no. of cups)
- Barcode to scan instead of plastic card
- Bonus Offers
- Deals: Promotions and Coupons
- My Rewards
- Map of stores with rich filters
- Customer Profile: profile, my stores, preferences, 7Rewards Cards

## Design advantages:

- Graphic indicator of loyalty point status
- 0 taps needed to see account status and barcode
- Usable bottom navigation
- Rewards grouped by no. of points needed, easily accessed through tabs

## Presentation in store:

The icon is very informative thanks to its characteristic logo labeled with the brand name. App preview contains screenshots with description, clearly presenting the app's core functions.

## Top functionalities:

**barcode scanner (89%), search (88%), loyalty program (86%), product reviews (86%), customer service (85%), local deals (84%)**

**Tchibo**  
Tchibo GmbH

482 Ratings  
Category: Shopping

15 850 Ratings  
Category: Shopping  
1 000 000 – 5 000 000 Downloads

Tchibo (Tchibo – Mode, Wohnen, Lifestyle & Kaffee) mobile application is a combination of Loyalty and mCommerce app. It gives access to loyalty card and personal vouchers, enables mobile shopping and informs about offers.

Android

## Functionality:

- Online shop: Tchibo collections
- Online shop: coffee and accessories
- Discounts and promotions
- QR code scanner
- Tchibo Card management
- Personal Coupons
- Map of stores

## Design advantages:

- Customized shortcuts
- Access to important functions with no internet connection

## Presentation in store:

Simple, characteristic icon and header picture in Google Play make it easy to identify Tchibo brand. App description is both satisfying to the user and correct in terms of ASO.

## Top functionalities:

**search (100%), registries (100%), customer service (100%), good deals (97%) free shipping (97%), loyalty program (94%), sales alert (94%)**

# Value Types

---

In general, mobile loyalty applications provide two main types of value: transactional and non-transactional value.

There are plenty of values brands can distribute. In the end, it's all about exclusive extra value for the customer which couldn't be distributed by the typical sales or marketing channel. The mobile channel is a kind of value itself - thanks to this channel, a customer can easily access these values and doesn't have to carry any loyalty card in their wallet.

**Transactional value** is directly related to performing a purchase of a product or service provided by a brand.

The most popular are:

- Coupons;
- Codes;
- Paying with digital currency;
- Free products or services;
- Access to presell or limited offers;

On the other hand, loyalty mobile apps can provide surprises that are not directly related to the offer of the brand.

Some examples of **non-transactional value**:

- No receipt is needed for returns;
- Dedicated customer care;
- Features eg. progress tracking or payment gate;
- Invitations for closed events;
- Gifts not related to the brand's main offer;
- Free samples;
- Educational materials.

# Product Gaps

# Testimonials & Roadblocks

---

*"The app doesn't really do much".*

*"I'm not sure if it's worth it".*

*"It was frustrating to get set up".*

**Bottom line: customers want & expect more from the mobile app.**

We interviewed all of our mobile app clients and they told us:

- I want to make It easy for my customers to use so that I get more people using It.
- I want to be able to communicate with my customers via the app so that I get more engagement with my brand.
- I want to know who my VIP customers are so that I can thank and reward them.
- I want to see the health of my program at my fingertips so I know If my Investment Is succeeding or failing.
- I want to cross-promote my business with other businesses so I can gain new audiences.
- I want to capture more customer data so I can create personalized marketing campaigns and make more sales.
- I want more customization options so my customers can experience more of my brand.
- I want to connect my program with my reservation software so It Is easier for customers to book.
- I want to send annual reoccurring promotions to my end-users so I create more sales.
- I want to be able to buy/sell gift cards through my app so I reach new audiences and make more sales.
- I want to geo-locate customers and serve them with offers so I can stand out from my competitors and make more sales.

# Opportunities

---

How do we **Improve the product value** to **retain** existing mobile app customers & **attract** new ones?

## 01 | ROI

Monitor effectiveness of product on client's desired business outcome.

## 02 | UX/UI

Make it easier for end-users to register and use

## 03 | SELF-SERVE

Give admins the ability to use more Ackroo marketing functions currently not offered in the app.

## 04 | DELIGHT

Increase end-user engagement

# Opportunity Solution Tree

# Target Outcome

---

Our goal is to increase the overall number of mobile app subscriptions by increasing the value of the product to clients, which in turn should proactively reduce attrition of said product.

We interviewed current Ackroo mobile app subscribers and learned that they are not seeing the value of the product, customers are frustrated with the signup process, and the app is limited in terms of how they would like to use it for their business goals (they would like to see things like promo & push notifications, wallet functions & gift card purchase/selling options) and there are not enough self-serve capabilities (profile changes, custom content options, etc).

We decided to focus on a high-impact opportunity: presenting the ROI data of a mobile app program to existing clients. We believe that in order for customers to trust that the mobile app is working for them and worthy of their investment, they need easy-to-understand data. We have explored a few different ways to do this, but the most promising one is sourcing usage data that can be compared to non-mobile users and present this data back to the client with clear "so what's".

| Key Indicator                                                | Activity / Project                                                                                            | Data / Outcome                                                                                                                                      |

| Clients feel empowered with self-serve reports               | positive feedback about reports                                                                               | <ul style="list-style-type: none"><li>38 existing clients</li><li>NPS improves and we get 15%+ positive reviews on feature</li></ul>                |

# Next Steps

---

Where do we go from here? This report is not just about looking back, but also looking forward. The Mobile App Progress Report is a continuous work in progress - a way for the product team to track its impact and improvements over time. This section outlines our strategy for continuing the good work done so far.

## 01 | Planning

Complete Internal documents, recommendations & marketing copy/assets.

Add next experiment to annual roadmap.

## 02 | Development

Finish development on V1 of mobile app reports In dashboard.

Begin next experiment.

## 03 | Launch

Release internal document, announce to relevant customers & update website. Begin measuring Impact.

# Customer Experience Map

# Internal Process

---

## Interactions/Steps by Department:

### BD:

Sales qualification questions:

1. Who is your demographic? How old are they?

Sam will qualify customers who have a younger audience. He mentioned 40+ he typically does not pitch to.

1. Do you have an existing email or communication list?

If so, Sam will suggest that a faster way to get customers registered and using their loyalty program is to set up a mobile app, notify that list of people to follow a link to the app store to download and make sure you reward those customers who register with an auto registration bonus (\$5-\$10) to make sure they come and use it soon!

Side note - if Sam hears about a customer improving their branding, he typically pitches the mobile app as a part of a brand refresh option.

### CS:

Use case - liked the idea of minimizing cost of cards and wanted to reduce people losing their cards

Bi-product of the conversation

Shift to mobile app for contactless payment. Good way to get people to buy in was that during COVID - people didn't want to touch cards (loyalty pitch)

End users are calling and asking for point balances - (if they are using VT or don't want to take the time to look it up) they could just download the app

Dynamic content to see menus etc

Helps with QR codes in advertising = more people registering vs. people talk to people (High-5 Chicken - good example)

QR code on business card links mobile app - high registration app

You can direct people to the website

---

## Interactions/Steps by Department:

### Finance:

Finance rarely interacts with mobile apps. We are pulled in to issue an invoice once all the work is done.

We review a billing report each day and bill based on what is processed in SF.  
We also will provide resources to back up the Mobile App setup to auditors when they review our file.  
We have asked the team to attach some form of backup to SF for our auditors.

### Operations:

1. The deal comes into operations via SF closed-WON
2. Ops creates a PO, adds marketing for the assets in SF
3. After the PO is generated it is assigned to Taylor and his team takes it from there.

### Marketing:

1. We get a PO
2. We reach out to the customer for design assets (logo, colours, ideas) if we don't already have them
3. We design the assets (Icon, banner, how it works, Launch screen)
4. The proof is sent to the customer for approval
5. Once approved, the assets are saved as PNG files
6. The folder is then forwarded to support@ackroo.com
7. The marketing team is removed from PO

# Internal Process

---

## Interactions/Steps by Department:

### O/S:

1. PO is assigned to Taylor for Triage
2. If the program shell is not created in AA, OS creates the program shell.
3. We then Create all the locations, businesses, Virtual Terminals, Receipt profiles, and menu profiles.
4. We add a Business for eGift if required
5. We add any POS integrations as devices (ADMIN->POINT OF SALE->APPS->ADD DEVICE) depending on what POS is being used. Petroleum Sites take the longest as each site needs 14 Bulloch devices and 2 Connexus devices. Infonet sites only need one, so these are faster. Maitre'd Integrations require us to also remote in using TeamViewer to configure the point of sale to work with Ackroo. Any DMS setups can take some time as well, often days/weeks as the dealerships need to request the feeds set up on their end before we can do the work on ours.
6. 5b. If the customer is using Bulloch, we also must create a spreadsheet of devices in excel that we created in AA and have them renamed with the SITE ID's.
7. If the customer is using mobile, we also need to add dates, GPS coordinates and store hours for each location which can also be time-consuming.
8. Once the program set up above is done, we then send the customer a welcome email, both from AA (Action->Send Welcome email, which prompts them to set up their ackroo account) and Zendesk (which provides instructions on how to install ackroo, fund and redeem and includes links to training materials. Additionally, we will CC any partners needed for setups, such as the Bulloch team)
9. 7b. If the customer is using a mobile app, we would send a secondary email with the documents and requirements needed to set up the mobile app.
10. 7c. If the customer is a loyalty customer, we also engage them to provide us info like loyalty percentage, redemption threshold etc.
11. 7d. Once eGift portal has been created we sent an email with the links to buy, register and sign that customers can add to their websites.
12. 8. The customer is now free to request training as needed. If the setup is more complex, we will usually reach out proactively for training, but simple setups like single location clover merchants can generally get by on the training materials in the email.

I would say a basic setup can take about 10 minutes (single location clover, gift only), a petro location can take 45 minutes to an hour between creating devices, having them renamed, and sending the welcome emails. Of course, much is also dependent on the customers, so this won't account for chasing customers and the actual training. As an FYI a training session is considered 60 minutes.

## Interactions/Steps by Department:

### Dev/ Engineering:

1. Steph/AK/Taylor (them usually) notify me of a mobile app to do. It usually shows up on the mobile Jira board. They provide me with a link to the google drive with the assets.
2. Copy the assets to the engineering drive.
3. Check the assets meet the requirements for app store submission (alpha, dimensions, etc)
4. Hop onto a server to create the OAuth access code.
5. Open up the wlma project that creates the skeleton of the app (the app name, slugs, primary colour, social media links and the assets themselves)
  - a. On the new screen, fill in the information as follows:
    - i. Application name - the name to appear in the app store
    - ii. Application ID - com.ackroo.<slugname> - what the package name will be for android / apple, usually a shortform name all lowercase
    - iii. Android Application ID - when possible keep it the same as above.
    - iv. Application slug - the merchant name in all lowercase, no spaces
    - v. Ackroo access token
      1. copy value in 'name' field
      2. Shell into a delayed pod
      3. Check your current context first
      4. If the suffix in the namespace title is stage → you need to switch to prod
      5.
        - a. `1.kubect! get pods -n prod | findstr delayed`
        - b. `2.kubect! exec -it -n prod <delayed pod name> -- bash`
        - c. `3.rake oauth_access_token:mobile program_name=<program name in quotes>` ``
6. Copy output from the rake command into access token field
7. Merchant Website / Contact URL / socials - Search for these and make sure they are the correct merchants
8. App Theme Colour - Pull from an existing asset, use a dark option if available
9. Images - Follow the dimensions guidelines for images, scale if necessary. Use a free program like GIMP to do so. Make sure Icons have 0 transparency (remove alpha channels).
10. Submit - If all goes well you will have a green confirmation message. Back out to the main screen and refresh, the new vendor should be the last entry in the list. Remember to "SMASH" the GENERATE button for the newly created app (press 2-3 times at least)
6. Open up the actual mobile app and plug in the values from 5 (mostly) and start up the mobile app locally and check it out.
7. Close the mobile app running locally and create dev builds and send them to [appetize.io](https://appetize.io) so i can open them up there and take the required screenshots for Apple App store submission and save them in the engineering folder
8. Complete the app store submission for both android and apple for their respective stores.
9. wait a few days for approval (or address Apples rejections (usually pretty bogus))
10. Get approval emails and send them to Taylor + Amber (Google sends an IRAAC email and Apple sends a proper approval email).

Here is the link for the actually knitty gritty tech details but you can get the general idea.

<https://ackroo.atlassian.net/wiki/spaces/PE/pages/2859728897/Creating+a+new+App>

Much of this stuff can be automated and I'm in the process of doing that. Just can't squeeze the time. Under ideal circumstances, the process normally takes 1h to 1.5 hours providing there are no hiccups.

Emails to clients to collect info:

**Taylor Gallant** Today 10:49 (assign)

Hello [MERCHANT NAME],

Our design team will be creating the Mobile app images for your review and approval momentarily. In addition to this, I have attached a few items for your review & completion in the links below, namely:

## MOBILE

(See attachments linked below)

1. The standard **terms and conditions** describing your gift & rewards program, for your completion -- This is a sample template with suggested wording. Feel free to modify/remove any sections as you see fit, and then you just need to replace all the variable sections with your legal company name.
2. A **consent form** for your completion that permits us to design and submit your app on your behalf, to Apple and Google stores.
3. Some samples of the "How It Works" page for visual and text options to consider. Please let us know if there is a layout you prefer.
4. Please provide the addresses of each location along with your hours of operation.

## App is ready!

Hello [MERCHANT NAME]

Great news, your mobile app was released today and is now ready for download for both Apple and Google Play. You can try it out for yourself as by downloading and creating an account using the "Sign Up" button on the bottom of the home page.

Google Play Store:  
[add link]

Discoverable in Apple App Store

### A few main things to note:

- Customers who would like to switch to mobile and already have a REGISTERED physical card can simply **sign in** with the email address and password previously registered.
- Customers who would like to switch to mobile and have an UNREGISTERED existing physical card/account can sign up in the app first and then **ADD their prior card #** into the app by clicking the '+' icon on the top left. They can move their balance to the mobile account by selecting the Options icon on the top right corner (3 dots).
- Processing: Your debit terminals are already equipped to receive a **4-digit paycode** and process a mobile transaction, in place of swiping a card (the mobile app displays a code when you tap the card image)
- In your program console at [manage.ackroo.com](https://manage.ackroo.com), you can differentiate which accounts are mobile in the "Cards" tab online, by the **phone icon** beside the account number.
- In your program console at [manage.ackroo.com](https://manage.ackroo.com), you can also set up **Automated Promotions**, whereby customers can receive a \$ bonus when signing up for Mobile, or on their Birthday month (Ex. \$5.00 for Mobile enrollment).

Do let me know if you have any questions, or if you'd like to run through any particular items around using the new app.

Regards/Cordialement,

The Ackroo Support Team

Asset requirements: Mobile

## Mobile Application Branding

*Please provide the following items for use in your custom Mobile app setup.*

### Images

Please send images in both editable format and as a flattened image (.png file).

- **App icon** - App button that appears on the phone home screen (1024x1024)
- **Banner** - Logo at the top of the sign up page (286x175)
- **Card art** - Image of Gift/Loyalty Card on the card page (1015x640)
- **"How It Works"** - Graphic describing your Gift & Loyalty program, how to earn, etc. (579x1243)
- **iOS launch images** - Image displayed when launching app/ Splash Page (640x960 and 640x1136)
- (Optional) **Android Feature Graphic** - For the Google Play Store display page. (1024x500)  
(Note: If not provided, a simple one will be generated using your business logo/card art and business' colour scheme.)

### Colors

- **Primary theme color** (used for most buttons) - (Hex Colour Code or RGB Colour Code)
- **Secondary theme color** (used for remaining buttons) - (Hex Colour Code or RGB Colour Code)

### Data

- **Terms and conditions** - Word/PDF Document describing relationship between the cardholder & merchant (See template attached)
- **Support email address** - Business email address to field customer inquiries about their card/account
- **Hours of operation** for each location - Monday through Sunday
- **Address(es)** for each location including GPS coordinates
- **Merchant-Developer Legal Consent** - Document giving Ackroo permission to use merchants' branding for app development on your behalf. For Google Play & Apple Store review process. (See attached)
